

G11 Rivelle granite

Extremely strong & low poreus

Easy to maintain

www.jardinico.com

ABOUT

Rivelle is an extremely strong and low porous natural stone. It is stain repellent and offers protection against UV, frost and mold. Due to its natural composition, variations in colour and pattern are inherent to each stone.

GENERAL GUIDELINES

- Due to its mineral composition, sandstone is not acid-resistant. Therefore, do not use any acidic products for maintenance.
- If you want to cover the material during the winter period, use a tarp.
- Do not use any sharp tools to avoid scratches.

CLEANING

- For regular maintenance, use a damp cloth with mild, pH-neutral soap and water. Rinse with plenty of water.
- Stubborn stains can be removed with the Stone Cleaner & Protector set.
 - Apply the Cleaner directly to the surface.
 - Allow it to soak for 30 seconds.
 - Use the included sponge to remove dirt and grease.
 - Rinse the surface with water.
 - For heavily stained surfaces, a second treatment may be necessary.

PROTECTION

To create a stain and water repellent impregnation you can use the Stone Cleaner & Protector set. For optimal maintenance, repeat this process at least once a year.

- Ensure the application temperature is between 5°C and 25°C.
- Shake the Protector well and apply it to the surface.
- Buff the surface with the included cloth.
- Allow it to dry completely for 48 hours before use.
- Repeat the procedure if necessary.
