

Powder coated steel

- ✓ high UV-resistance
- ✓ Scratch resistant
- ✓ Easy to maintain

ABOUT

Powder-coated steel is strong, stylish and built to last. The special coating protects against rust, scratches and fading, making it perfect for both indoor and outdoor use.

GENERAL GUIDELINES

- Do not use any sharp tools to avoid scratches.
- Do not use a high pressure cleaner nor a steamer.
- Do not use aggressive chemicals such as acetone, ammonia or bleach.
- If you want to cover the material during the winter period, use a tarp.
- Avoid prolonged contact with acid rain, bird droppings, or resin - rinse it off as soon as possible.

CLEANING

- For regular maintenance, use a damp cloth with mild, pH-neutral soap and water. Rinse with plenty of water.
- Stubborn stains can be removed using isopropyl alcohol. Apply a small amount and test it first on an unnoticeable area.

REPAIRING

- For minor surface marks on your steel base, you can use a Corrector Pen. Apply a thin layer and allow the surface to dry for at least 6 minutes before using the product again.

Corrector pen

Jardinico collection:

Caractère bases
1, 2, 3, 4, 5 & 6 Series

Antego base
125 kg

Elba bases
44 & 84 kg
